

MSC CLINICAL RESEARCH METHODS AND EVIDENCE-BASED MEDICINE

This two-year part-time MSc programme gives you the opportunity to complete a personalised and relevant master's-level degree that requires minimal study time away from clinical practice. It makes use of motivated and experienced clinical academics to deliver a programme that will translate to excellent, individualised academic clinical practice. The programme complements your clinical career, will expand your academic skills and offers the flexibility to focus on areas of practice that are relevant to your career plans.

The programme is divided into clinical, research methods and research project units. The clinical component is designed with practical clinical relevance in mind. You will direct your own learning towards topics that you are interested in and are relevant to your career. You will choose one of the following sub-speciality areas of medicine according to the clinical related speciality of specialist doctor and surgical trainees:

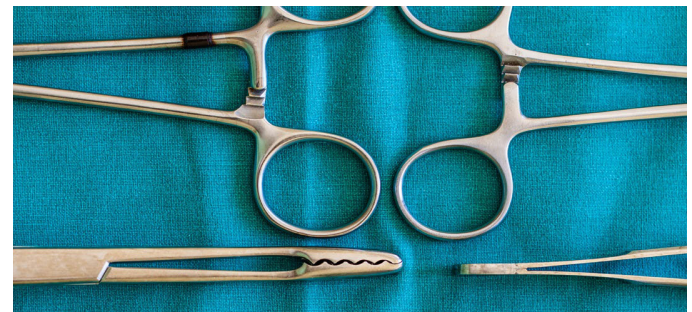

- Trauma and Orthopaedic surgery;
- Anaesthetics and intensive care;
- Renal medicine;
- General surgery;
- Obstetrics and Gynaecology;
- Vascular surgery;
- Oncoplastic surgery.

You will be registered on the overarching degree, and then transfer onto the pathway title of your chosen sub-speciality area of medicine.

Learning is assessed through oral presentations, poster presentations and reflective writing, which requires minimal time away from patient care and mirrors the professional activities of a specialist doctor and surgical clinician scientist.

The research methods component comprises seminars in techniques of critical appraisal, trial design, data manipulation and analysis.

The research dissertation project unit offers an opportunity to produce a quality piece of academic writing in the form of an academic journal paper; many past students have gone on to publish their work in peer reviewed academic journals.

FEES

UK: part-time (two years) £7,800 per year

Overseas: part-time (two years) £17,400 per year

Start date: September 2024

Application deadlines:
24 July 2024 for Overseas applicants.

9 August 2024 for UK applicants.
